Yaseen Mohammed

Plano, Texas, 75074 | Data Engineer & Analyst | 469-512-0058 | Yaseenam3@gmail.com | linkedin.com/in/yaseenam

EDUCATION

The University of Texas at Dallas *May 2026*

Master of Science, Business Analytics and Artificial Intelligence

The University of Texas at Dallas *December 2023*

Bachelor of Science, Data Science

SKILLS

- **Certifications:** AWS Certified Machine Learning, Microsoft Azure Data Scientist Associate.
- **Analysis Tools:** PowerBI, Tableau, MS Excel, RStudio, Scikit-learn
- **Programming:** SQL, Python, R, Scala, Java, C++, HTML/CSS, JavaScript
- **Data Science:** Business Analytics & Statistical Analysis, Machine Learning, Data Exploration, Feature Engineering, Data Transformation & Visualization, Recommender Systems, Natural Language Processing
- **Data Tools:** Spark, Hadoop, MySQL, AWS infrastructure, MongoDB, Azure infrastructure

PROFESSIONAL EXPERIENCE

Data Engineer | Zinzu, Redmond, WA *March 2024 - Present*

- Engineered data infrastructure using Azure services (SQL, NoSQL, Cosmos DB, Blob Storage) to support 70% of operational data, improving efficiency and scalability.
- Automated frontend and backend server creation and maintenance, increasing operational efficiency by 60% through Bash scripts and Azure services for load balancing and GitHub integration.
- Developed RESTful APIs and implemented backend servers to support website and app functionality, enhancing user experience with streamlined UX designs.
- Integrated natural language analytics using GPT API for custom data insights, enabling user-friendly and adaptive analytics.
- Researched geospatial analytics features for the platform, compiling a detailed 21-page report on use cases, benefits, implementation strategies, and competitive analysis, presented to the CEO for strategic planning.
- Optimized big data processing by implementing Apache Spark, improving processing speed and reducing server latency issues.
- Reduced server manual task time by 70% through automated maintenance processes, leveraging Bash scripts, Azure Monitor, and GitHub for continuous deployment.
- Engineered SQL prompts in order to derive statistics and insight from web data.

Business Analyst | Standard Aero, Dallas, TX *February 2025 - August 2025*

- Developed and maintained Power BI dashboards to support cross-departmental reporting, enabling leads to monitor individual employee performance and managers to track department-level KPIs.
- Collaborated with multiple departments to gather business requirements and translate them into actionable reporting solutions.
- Enhanced financial visibility by updating the billing report with quarterly budgets and performance targets, delivering insights into company financial health through dynamic KPIs.
- Designed and implemented robust data pipelines between Snowflake and Oracle databases, using advanced SQL transformations to prepare data for reporting and analytics.
- Managed Power BI security roles to ensure secure access to role-based reports, allowing leads and managers to view only relevant performance metrics.
- Applied predictive statistical techniques to forecast KPIs and ensure alignment with company performance goals.

Data Scientist Intern | Autix Automotive, Dallas, TX *August 2023 - December 2023*

- Improved predictive ML model accuracy by 70%, using Scikit-learn, XGBoost, and ensemble methods to optimize car price prediction models.
- Developed NLP-based text extraction workflows using GPT API, converting unstructured car descriptions into structured data, boosting dataset predictive power by 30%, and saving $80k in external software costs.
- Built data pipelines for collecting and cleaning data from web scraping sources, storing results in Azure Blob Storage for scalability and reliability.
- Engineered custom ML models for different price points of cars, from luxury to affordable, ensuring targeted and precise predictions.
- Led a team through model development, data preprocessing, and pipeline creation, ensuring efficient collaboration and task execution.

Data Science Intern | Vital Synapses, Dallas, TX *May 2023 – August 2023*

- Created a data pipeline for processing healthcare insurance claims, automating data extraction, cleaning, and transformation for streamlined analytics.
- Developed 10+ dashboards in PowerBI, visualizing relationships between claim processing times and factors such as symptoms and diagnoses.
- Applied statistical methods (e.g., regression, hypothesis testing) to diagnose lead times for 70% of insurance claims, uncovering patterns and root causes of delays.
- Addressed incomplete and inconsistent data through tailored imputation techniques using linear regression, ensuring reliable and standardized datasets for analysis.
- Optimized insights from healthcare data by integrating statistical models and dynamic dashboards, enabling stakeholders to make informed decisions.

Research Analyst | Pricesenz, Dallas, TX *May 2022 – August 2022*

- Led a team of three interns to evaluate $10k+ worth of BI tools, including PowerBI, Tableau, Zapier, and AWS, compiling a detailed report on features, integration, pricing, and recommendations for stakeholders.
- Implemented a data pipeline from the company's CRM to PowerBI, enabling seamless KPI dashboard creation with 40+ data points, providing actionable insights for multiple departments.
- Developed customized KPI dashboards aligned with business goals, visualizing key metrics and improving decision-making efficiency across teams.
- Negotiated with vendors for BI tools, securing cost-effective solutions tailored to company requirements.
- Resolved data inconsistencies between CRM and PowerBI by implementing robust data cleaning and transformation steps, ensuring reliable and accurate insights.

EXTRACURRICULARS

Rice Health Policy Hackathon

- *Houston, TX | July 2023*

- Co-authored an 8-page policy research paper on improving vaccine reporting by integrating ImmTrac2 into Texas's Health Information Exchange (HIE), projecting a 30% increase in efficiency.
- Collaborated with healthcare professionals to identify inefficiencies in current immunization record-keeping processes, proposing technology-driven solutions.
- Analyzed immunization data to uncover bottlenecks, recommending streamlined record-sharing to reduce redundant vaccinations.
- Presented findings to district judges, showcasing actionable strategies and addressing questions from judges and peers among a competitive cohort of 100+ participants.

ASA Data fest 2023

- *SMU | March 2023*

- Awarded 3rd place for analyzing 10GB of data across 8 datasets, uncovering trends in pro bono legal cases for the ABA Foundation.
- Performed exploratory data analysis (EDA) in R, using heat maps and distribution graphs to identify location-specific challenges, such as high failure rates in Mississippi.
- Built a multiple linear regression model using NLP-extracted features, achieving 90% accuracy in predicting pro bono case success based on response times and urgency indicators.
- Managed large datasets efficiently by segmenting data and leveraging R's visualization tools, revealing critical insights to improve legal system outcomes.
