EDUCATION

The University of Texas at Dallas

May 2026

Master of Science, Business Analytics and Artificial Intelligence

The University of Texas at Dallas

December 2023

Bachelor of Science, Data Science

SKILLS

- **Programming:** Python, SQL, JavaScript, HTML/CSS, R, Java, C++
- **AI & Agentic Systems:** LLM Integration (GPT API), Natural Language Processing, Autonomous Agent Design, Reasoning Loops, Agentic Workflows
- **Cloud & Infrastructure:** Azure (Cosmos DB, Blob Storage, Monitor), AWS infrastructure, RESTful APIs, GitHub CI/CD, Bash Scripting
- **Data & ML Tools:** Scikit-learn, XGBoost, Apache Spark, MongoDB, Snowflake, MySQL, Hadoop
- **Certifications:** AWS Certified Machine Learning, Microsoft Azure Data Scientist Associate

PROFESSIONAL EXPERIENCE

Data Engineer | Zinzu, Redmond, WA

March 2024 - Present

- Integrated GPT API to build a natural language analytics layer on top of structured data infrastructure, enabling adaptive, user-driven insights without rule-based logic.
- Architected modular backend systems using Azure services (Cosmos DB, Blob Storage, SQL/NoSQL) and RESTful APIs, supporting 70% of operational data with scalable, loosely coupled components.
- Automated server provisioning and CI/CD pipelines via Bash scripts and Azure services, reducing manual operational overhead by 70% and enabling continuous deployment through GitHub integration.
- Optimized large-scale data processing with Apache Spark, improving pipeline throughput and reducing server latency to support real-time analytical workloads.

Data Scientist Intern | Autix Automotive, Dallas, TX

August 2023 - December 2023

- Developed NLP-based agentic text extraction workflows using GPT API to convert unstructured car descriptions into structured datasets, boosting predictive power by 30% and saving \$80K in external tooling costs.
- Engineered modular ML pipelines using Scikit-learn and XGBoost, improving car price prediction model accuracy by 70% across distinct market segments (luxury to affordable).
- Built end-to-end data collection and transformation pipelines from web scraping sources to Azure Blob Storage, ensuring scalability and reproducibility across model iterations.
- Led cross-functional team through model development, data preprocessing, and pipeline creation, ensuring clear task decomposition and efficient parallel execution.

Data Science Intern | Vital Synapses, Dallas, TX

May 2023 – August 2023

- Created a data pipeline for processing healthcare insurance claims, automating data extraction, cleaning, and transformation for streamlined analytics.
- Developed 10+ dashboards in PowerBI, visualizing relationships between claim processing times and factors such as symptoms and diagnoses.
- Applied statistical methods (e.g., regression, hypothesis testing) to diagnose lead times for 70% of insurance claims, uncovering patterns and root causes of delays.

PROJECTS

ASA Data fest 2023

- SMU | March 2023
- Built a modular NLP pipeline in R to analyze 10GB across 8 datasets, extracting features from unstructured legal text to power a multiple linear regression model achieving 90% accuracy in predicting pro bono case outcomes.
- Applied exploratory data analysis and statistical reasoning to surface location-specific failure patterns, enabling data-driven recommendations for improving legal system efficiency.
- Decomposed a large, open-ended analytical problem into self-contained sub-tasks (EDA, feature engineering, modeling, visualization), earning 3rd place among competitive teams at ASA DataFest 2023.
